## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 10/14/2008 have been fully considered but are considered moot in view of the new grounds of rejection below.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –  
(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-22, 24-30, and 32-73 are rejected under 35 U.S.C. 102(b) as being anticipated by OTSUKI ET AL (JP 08322449-A).

OTSUKI ET AL discloses a mobile fumigation system positioned within at least one ISO general purpose shipping container (container van 1) comprising a first gas-tight compartment including a fumigation chamber (10); a second compartment (9) including a fumigation apparatus (12) operatively coupled to the fumigation chamber (see Fig. 1); and a partition wall (3) separating the first and second compartments; a fumigant inlet device (21, 13) operatively coupled to the fumigation chamber through the partition wall to allow a fumigant (CO<sub>2</sub>) into the fumigation chamber (10); an extraction device (14) operatively coupled to the fumigation chamber and arranged to remove a majority of the fumigant from the fumigation chamber (see Figs. 2-4); an absorption means (35) operatively coupled to the extraction device (via

interconnection of the parts into an assembly) and being designed to absorb the fumigant removed from the fumigation chamber (35 performs the function of absorbing ethylene which is circulating within the container; no particular fumigant or absorption means being particularly claimed). Also disclosed is a system control box containing a plurality of floor and wall-mounted pipes (see pipes between each of 14-17, 19, & 35 and apertures in 5, 6) independently connected via a system of taps and connectors to a fumigant sampling and detection meter unit (17 connected to the pipes via the interconnected closed loop system; no particular structural configuration being claimed) located in the second compartment (9). The system control box (25) containing a fumigant sampling and detection meter unit (17) and power supply switches for mixing fans, exhaust fan (14), lights (inherently there are light indicators on a control panel), gas heaters (26), and valve actuators (for 18, 22, 23).
